

Vehicle Board - Computer Vision Based Vehicle Counting and Vehicle Flow Analysis System

Whether it is a petrol pump/gas station, a parking lot, a toll booth, a car wash or a drive-throughs, computer vision based vehicle counters play a great role. They not only count the number of vehicles but also plot the flow of vehicles visually.

Vehicle Board's visual output like peak traffic flow times or least traffic flow times can then be used to make important business decisions.

Vehicle Board can also be used to counter check vehicle count at premises already installed with vehicle counters or toll barriers.

All this information is available live in real time.
